

PROPYLESS

Propylene glycol

Easily absorbed, emollient lotion that moisturises and protects

Dry and itchy skin? For skin to remain soft and supple it needs to contain a certain amount of water and oil. These substances strengthen and repair a damaged skin barrier so that the skin does not become dry, tight and chapped. Dry skin can easily become irritated and vulnerable, which can result in itching and eczema. The problem is most pronounced during the fall and winter.

Hydrates and protects dry skin

Propyless is an easy-to-apply skin lotion for the whole body that does not cause greasiness or burning. It contains the active ingredient propylene glycol, which binds water and allows the skin to more easily retain moisture. Propyless also contains oil (9%) to help ensure that the skin becomes soft and supple again. Oil is also important to protect the skin. In addition, Propyless has an antimicrobial effect against certain bacteria and fungi.

Who can use Propyless?

It doesn't matter whether your skin is slightly dry or very dry, or whether you have small or large patches of dry skin. Propyless treats many different types of dry skin, for example on the face or the trunk, or even on the scalp.

Propyless is also ideal as a hand lotion or after shaving, for both men and women, since it has an antimicrobial effect. It is also an excellent complement to treat the dry and irritated skin that often results from the treatment of acne with medications. Propyless is approved for all ages (from age 0 years) Skin lotion for the entire family!

How to use Propyless

Apply the lotion as needed, or two or more times daily, as well as after contact with water.

Tip! Store Propyless in the refrigerator to enhance its itch suppressant and cooling effect.
